1 Framework Comparison

I used these 3 prompting frameworks to complete the task, all were used in github copilot:

- **ICIO** (Instruction-Context-Input-Output)
- **RTF** (Role-Task-Format)
- **RISE** (Request-Input-Steps-Expectation)

1.1 Performance Summary Table

Framework	Correct / Total	Accuracy (%)	Inference Time
ICIO	148 / 155	95.48%	6m 39s
RTF	154 / 155	99.35%	13m 00s
RISE	154 / 155	99.35%	7m 46s

Table 1: Comparison of accuracy and execution time across ICIO, RTF, and RISE prompts.

As we can see from the data Both RTF and RISE performed the same in therms of accuracy both correctly predicted all of the real SQL queries and did not predict the trick query. RISE however did in significantly less time and thus was the best in this case. ICIO which i expected to be the best, was the the quickest but however only managed 148/155 correctly predicted queries

1.2 Visual Performance Metrics
